

Lab 01

1:

The following data set represents a random sample of the monthly income (in thousands of L.E)
(40, 3, 3, 4, 4, 6)

Find:

1. The range $= 40 - 3 = \underline{37}$

2. The variance Mean $= (40+3+3+4+4+6) / 6 = \underline{10}$

Sum of the squared differences $= (40-10)^2 + (3-10)^2 + (3-10)^2 + (4-10)^2 + (4-10)^2 + (6-10)^2 = \underline{1086}$

Variance $= (1086 / 5) = \underline{217.2}$

3. The standard deviation

St.d $= \sqrt{217.2} = \underline{14.73}$
